Gemini column assumes ~60% of each minute is speech being translated. If both people talk non-stop it rises to \$0.0421 (₹4.06) per minute; a mostly silent line costs less.

Notes

- **The phone leg decides the price.** Everything except the call to the other person is a fixed \$0.0423 (₹4.08) per minute wherever you call. A Saudi mobile leg costs about 6× India's, which makes the whole minute about 3.9× as expensive.
- **Calls to India need a non-Indian caller ID.** We call from a US number (\$1.15/month); calls arriving from abroad over the internet may not show an Indian number.
- **International calls are switched off today.** The app only allows +91 numbers. Calling abroad needs that list widened and the country enabled in Twilio's Geo Permissions.
- **Gemini paid tier.** The free tier costs \$0 but lets Google use call audio to improve its products, so real calls should use the paid rates shown here.
